

## Quality assurance

Decor uses only the finest quality materials for its products. Decor will replace any product showing a manufacturing defect with the same or equivalent product if it is returned to Decor with proof of purchase.

Realseal™ storers are designed and made in Australia from imported and Australian components.

Decor, Tellfresh and Microsafe are registered trade marks and Realseal and Thermoglass are trade marks of The Decor Corporation Pty. Ltd.

food storer system

### Realseal™ food storer

This storer has a soft, flexible silicone seal in the lid that makes it really airtight and leakproof – and really nice to use. The lid also has a steam/air release vent.

For a really airtight seal, close the vent immediately after placing the lid on the container.

To remove the lid easily, first click open the steam/air release vent.

### For everyday use

The storer is suitable for refrigerator, freezer and pantry storage and can also be used in the microwave for quick reheating – click open the steam/air release vent first.

### Decor cooking products

For longer microwave reheating or cooking, we

recommend our Microsafe® range or one of our new Thermoglass™ products. Thermoglass™ can be used in conventional and microwave ovens.

### Cleaning

The storer is dishwasher safe. The silicone seal on the lid and the steam/air release button can be easily removed for cleaning.

### Very useful Tellfresh® tags

When storing food, you can clip a Tellfresh® tag on the storer and note the contents, use-by date, date stored or frozen, or reheating instructions. Just erase the notes and the tag is ready to re-use. Tag sets including pencil and eraser are sold separately.

### Please note

Microwaving foods high in sugar, fat, tomatoes or curries may mark or stain the storer but will not affect its usability. Prolonged reheating on high may cause damage to the storer.

Do not use the storer in a conventional or toaster oven.
